AP Statistics Review - Probability

This unit on probability covers how to use simulations to calculate experimental probabilities and a variety of other methods (the addition rule, the multiplication rule, conditional probability) for calculating probability. Later, we'll use our understanding of probability to answer statistical questions.

Probability | AP®/College Statistics | Math | Khan Academy

- The probability of an outcome is a number between 0 and 1 inclusive. An outcome that always happens has probability 1. An outcome that never happens has probability 0.
- The probability of an outcome occurring equals 1 minus the probability that it

AP Statistics Summer Math Packet

Well, let's see. We have a total of 20 snowy days and we are delayed 12 of those 20 snowy days, and so this is going to be a probability, $12/20$ is the same thing as, if we multiply both the numerator and the denominator by five, this is a 60% probability, or I could say a 0.6 probability of being delayed when it is snowy.
