Richard of Eire the self-originating philosopher, poet, artist, and publisher presents this metaphor rich life regression work as a miracle for our own day and a blessing for the generations to come. By means of dialogues, poems, letters and articles on love, culture, heritage, morality, and the environment he visits a past of himself in the 'present' rather than a past of himself in the 'past' per se. This beautifully engaging compact offering is a work of fiction based on a good deal of factual input; a cornucopia of literary unpredictability. The transcending message of this chanson d'amour parfumée may be best summed up by stating that while love invites us to love it is to friendship that we are we called. A beautiful volume inspiring ardent trust, hope, and love in self throughout the ages. The work is presented in a 'status update format' embroidered with the author's own exquisite 185 digital artworks: all in colour. Note: in the print edition the artworks are in greyscale. The fonts and page numbering in this ebook correspond to the 2009 hardback edition.

This is a collective study, in nine new essays, of the close connection between theology and cosmology in Stoic philosophy. The Stoic god is best described as the single active physical principle that governs the whole cosmos. The first part of the book covers three essential topics in Stoic theology: the active and demiurgical character of god, his corporeal nature and irreducibility to matter, and fate as the network of causes through which god acts upon the cosmos. The second part turns to Stoic cosmology, and how it relates to other cosmologies of the time. The third part examines the ethical and religious consequences of the Stoic theories of god and cosmos.

Mechatronics is a multidisciplinary field combining Mechanical, Electronic, Computer, and other Engineering fields to develop intelligent processes and products. Based on thirty years of extensive work in industry and teaching, this book provides an overview of the sensors and sensor systems required and applied in mechatronics with an emphasis on understanding the physical principles and possible configurations of sensors rather than simply a discussion of particular types of sensors. Well illustrated with examples of commercially available sensors and of recent and future developments, this book offers help in achieving the best solution to various kinds of sensor problems encountered in mechatronics. In a clear and detailed manner, the author reviews the major types of transducers, presents a characterization of the state-of-the-art in sensing technology and offers a view on current sensor research. This book will be a vital resource for practicing engineers and students in the field. Comprehensive coverage of a wide variety of sensor concepts and basic measurement configurations encountered in the mechatronics domain Written by a recognized expert in the field who has extensive experience in industry and teaching Suitable for practicing engineers and those wanting to learn more about sensors in mechatronics

This new edition of a classic text, comprehensively revised throughout, focuses on the role of international organizations in the context of emerging challenges to the centrality of the nation-state in the international system, such as humanitarianism, environmentalism, new legal standards and regimes, and controversial concepts such as "civil society" and

"globalism." As inter-governmental and international non-governmental activities are increasingly being merged, for example in the area of peace-keeping, this erodes the sanctity of the territorial state as the primary political unit. Similarly, technological and social changes such as the Internet, encourage "borderless" activities (legal and illegal) by non-state actors. This book provides the basis for students to consider international organizations against the backdrop of a thorough rethinking of our international system and its prospects for the future in the face of these fundamental and unprecedented developments.

This volume contains contributions written by participants of the 4th Workshop on Operator Theory in Krein Spaces and Applications, held at the TU Berlin, Germany, December 17 to 19, 2004. The workshop covered topics from spectral, perturbation, and extension theory of linear operators and relations in inner product spaces.

In this stunning follow-up to his acclaimed debut, *Thunderer*, Felix Gilman's brave hero returns from one thrilling and dangerous quest only to confront another. In a magical landscape where time is meaningless, reality precarious, and countless selves work toward countless possible futures, one man must seek a city's truth—and rediscover his own. Imprisoned with a prophetic half human, half beast, the lost man learns his name: Arjun. Slowly the terrible memories emerge, and at last he remembers where—and when—he has been. . . . In the last days of the once great city of Ararat, Arjun is just another ghost lost in the shadows of the Mountain. To some, the Mountain is a myth, to others, a weapon. Above all, it is a dark palace leaving its seekers to wander the city below. For no matter how far one walks, the Mountain never draws closer, and time itself becomes another trap. Rescued by two sisters from the mindless Know-Nothings who erode what's left of the city, Arjun volunteers to retrieve their long-lost third sister from a ghost like himself: Brace-Bel, another man out of time. It will require a perilous trek through ruins to a decadent mansion—one surrounded by traps and devices that could not possibly exist yet. And what awaits Arjun inside is something he could not possibly have imagined. As he struggles to recover the lost girl and piece the fragments of his life back together, Arjun knows he must finally return to the beast to hear the rest of its prophecy. But each step is more treacherous than the last . . . and the beast who knows his fate may pose the most deadly trial yet. A spellbinding novel of imagination and intrigue, *Gears of the City* will propel you into an adventure like no other, in a world like no other.

"Corby has not only made Greek history accessible—he's made it first-rate entertainment." --Kelli Stanley, award-winning author of *Nox Dormienda* and *City of Dragons* Athens, 460 B.C. Life's tough for Nicolaos, the only investigating agent in ancient Athens. His girlfriend's left him and his boss wants to fire him. But when an Athenian official is murdered, the brilliant statesman Pericles has no choice but to put Nico on the job. The case takes Nico, in the company of a beautiful slave girl, to the land of Ionia within the Persian Empire. The Persians will execute him on the spot if they think he's a spy. Beyond that, there are only a few minor problems: He's being chased by brigands who are only waiting for the right price before they kill him. Somehow he has to placate his girlfriend, who is very angry about that slave girl. He must meet Themistocles, the military genius who saved Greece during the Persian Wars, and then defected to the hated enemy. And to solve the crime, Nico must uncover a secret that could not only destroy Athens, but will force him to choose between love, and ambition, and his own life.

Featuring a wide range of international case studies, *Ethics, Technology, and Engineering* presents a unique and systematic approach for engineering students to deal with the ethical issues that are increasingly inherent in engineering practice. Utilizes a systematic approach to ethical case analysis -- the ethical cycle -- which features a wide range of real-life international case studies including the Challenger Space Shuttle, the Herald of Free Enterprise and biofuels. Covers a broad range of topics, including ethics in design, risks, responsibility, sustainability, and emerging technologies Can be used in conjunction with the online ethics tool Agora (<http://www.ethicsandtechnology.com>) Provides engineering students with a clear introduction to the main ethical theories Includes an extensive glossary with key terms

This book testifies to the growing interest in the many spaces of utopia. It intends to 'map out' on utopian and science-fiction discourses some of the new and revisionist models of spatial analysis applied in Literary and Cultural Studies in recent years. The aim of the volume is to side-step the established generic binary of utopia and dystopia or science fiction and thus to open the analysis of utopian literature to new lines of inquiry. The essays collected here propose to think of utopias not so much as fictional texts about future change and transformation but as vital elements in a cultural process through which social, spatial and subjective identities are formed. Utopias can thus be read as textual systems implying a distinct spatial and temporal dimension; as 'spatial practices' that tend to naturalize a cultural and social construction – that of the 'good life', the radically improved welfare state, the Christian paradise, the counter-society, etc. – and make that representation operational by interpellating their readers in some determinate relation to their givenness as sites of political and individual improvement. This volume is of interest for all scholars and students of literature who wish to explore the ways in which utopias of the past and recent present have circulated as media of cultural exchange and homogenization, as sites of cultural and linguistic appropriation and as foci for the spatial formation of national and regional identities in the English-speaking world.
