This book presents a set of tools that will aid in deciding whether a project should go ahead, be improved, or abandoned altogether by pinpointing its vulnerabilities. It offers a review of project feasibility analysis, and more critically, psychodynamic aspects that are often neglected, including how stakeholders interact. It provides a complement to the common techniques used for analyzing technical, financial, and marketing feasibility. The goal is to identify "hidden truths" and eliminate those gray areas that jeopardize the success of a given project. The focus is on uncovering points of vulnerabilities in four key aspects of a project: People, Power, Processes, and Plan.

Essential for any real estate professional or student performing feasibility studies for property development using Microsoft Excel and two of the most commonly used proprietary software systems, Argus Developer and Estate Master DF. This is the first book to not only review the place of financial feasibility studies in the property development process, but to examine both the theory and mechanics of feasibility studies through the construction of user friendly examples using these software systems. The development process has seen considerable changes in practice in recent years as developers and advisors have adopted modern spread sheets and software models to carry out feasibility studies and appraisals. This has greatly extended their ability to model more complex developments and more sophisticated funding arrangements, saving time and improving accuracy. Tim Havard brings over 25 years of industry and software experience to guide students and practitioners through the theory of development appraisals and feasibility studies before providing internationally applicable worked examples and potential pitfalls using Excel, Argus Developer and Estates Master DF.

Feasibility study and business plan
Learn How to Present a Completed Feasibility Study
A feasibility study is a thoroughly researched analysis of a plan or method. The purpose of a feasibility study is to determine and then communicate whether an action being considered is practical for a business or project. These studies usually contain detailed information about the financial structure for the plan and an analysis of the market with regards to the proposal (if needed). It also contains the suggested logistics for delivering a product or service, the resources you'll need, the personnel support and the organizational structure required. Presenting your feasibility study is just as important as the work you put into it.

How to Assemble Your Feasibility Study
How you present your final study is just as important as the information it contains. If you have a lot of material, organize it into a portfolio or binder. Finding information easily and quickly is important to executives, managers, lenders, and investors, so include tabs (type them if at all possible) to indicate each component in your study. Cover letters should not be generic but should be individualized depending upon with whom you are submitting the study. Before you submit your study, have someone else proofread it for you to check for content and errors. Typographical errors will make your study appear rushed or unprofessional, and if your descriptions and calculations do not make sense to the reader the action will be ruled unfeasible as presented. Although you write your conclusion last, it serves as a summary of the details in your study. You can place it at the end of your document (before any exhibits and attachments), but placing it after the table of contents sets the tone and highlights key issues for the reader to be aware of before they read the rest of the study.
