The second irony is that the Ada mandate, meant to force DoD software projects to catch up with progress in software engineering by retiring older approaches, has also had in the ensuing years the probably unintended effect of slowing down the adoption of newer (post-Ada) technology by the military-aerospace community. The lessons of Ada remain irreplaceable, and it is a pity that many of the O-O languages

document, the Ada Reference Manual (ARM). Extracts from the ARM are used throughout and there are extensive cross references to the ARM. A comprehensive glossary and technical quizzes assist the reader in developing the ability to use the ARM as a practical reference. Comparisons with familiar languages like C and Java are given to facilitate the transition to Ada. The features of Ada 2005 are used routinely, but they are carefully identified, so that programmers using Ada 95 will also find the textbook useful. The companion website contains the full source code of nearly 100 case studies and 100 technical quizzes.

These proceedings include tutorials and papers presented at the Sixth CSR Conference on the topic of Large Software Systems. The aim of the Conference was to identify solutions to the problems of developing and maintaining large software systems, based on approaches which are currently being undertaken by software practitioners. These proceedings are intended to make these solutions more widely available to the software industry. The papers from software practitioners describe: □ important working systems, highlighting their problems and successes; □ techniques for large system development and maintenance, including project management, quality management, incremental delivery, system security, independent V & V, and reverse engineering. In addition, academic and industrial researchers discuss the practical impact of

current research in formal methods, object-oriented design and advanced environments. The keynote paper is provided by Professor Brian Warboys of ICL and the University of Manchester, who masterminded the development of the ICL VME Operating System, and the production of the first database-driven software engineering environment (CADES). The proceedings commence with reports of the two tutorial sessions which preceded the conference: □ Professor Keith Bennett of the Centre for Software Maintenance at Durham University on Software Maintenance; □ Professor John McDermid of the University of York on Systems Engineering Environments for High Integrity Systems. The remaining papers deal with reports on existing systems (starting with Professor Warboys' keynote paper), approaches to large systems development, methods for large systems maintenance and the expected impact of
