Cascading Style Sheets (CSS) is a stylesheet language used to describe the presentation of a document written in HTML or XML (including XML dialects such as SVG, MathML or XHTML).CSS describes how elements should be rendered on screen, on paper, in speech, or on other media. CSS among the core languages of the open Web and is standardized across Web browsers according to the W3C specification.

CSS: Cascading Style Sheets | MDN

JavaFX CSS does not support comma-separated series of font family names in the -fx-font-family property. The optional line height parameter when specifying fonts is not supported. There is no equivalent for the font-variant property. JavaFX CSS uses the HSB color model instead of the HSL color model.

JavaFX CSS Reference Guide - Oracle Cloud

CSS is pivotal to the future of Web documents and will be supported by most browsers. CSS is more exact than tables, allowing your document to be viewed as you intended, regardless of the browser window. Keeping track of nested tables can be a real pain. CSS rules tend to be well organized, easily read, and easily changed.

The goal for JavaFX CSS is to allow web developers already familiar with CSS for HTML to use CSS to customize and develop themes for JavaFX controls and scene-graph objects in a natural way. JavaFX has a rich set of extensions to CSS in support of features such as color derivation, property lookup, and multiple background colors and borders ...

JavaFX CSS Reference Guide - Oracle

CSS Grid Layout is the most powerful layout system available in CSS. It is a 2-dimensional system, meaning it can handle both columns and rows, unlike flexbox which is largely a 1-dimensional system. You work with Grid Layout by applying CSS rules both to a parent element (which becomes the Grid Container) and to that element's children (which become Grid Items).

A Complete Guide to Grid | CSS-Tricks
