The carburetor is mounted on the top of the intake manifold, and has both air and fuel inlets. The air inlet is sometimes a duct attached to the carburetor or can be just an air filter housing mounted directly on top of the carburetor. The fuel is supplied by a fuel line coming from the fuel tank. The carburetor is responsible for atomizing fuel and spraying it into the air that enters the intake manifold.

A good carburetor tune can make an engine, while a carburetor that's mistuned can literally break an engine. A good tune means the engine should start and idle without stalling, and respond instantly when the pedal hits the metal. The carburetor will also deliver the optimum air/fuel ratio throughout the engine's RPM range to achieve peak horsepower and torque.
